

Additional EDA

EDA setup

Weekly case counts per city:

City	count	mean	std	min	25%	50%	75%	max
Iquitos	520	7.57	10.77	0	1	5	9	116
San Juan	936	34.18	51.38	0	9	19	37	461

Weekly cases

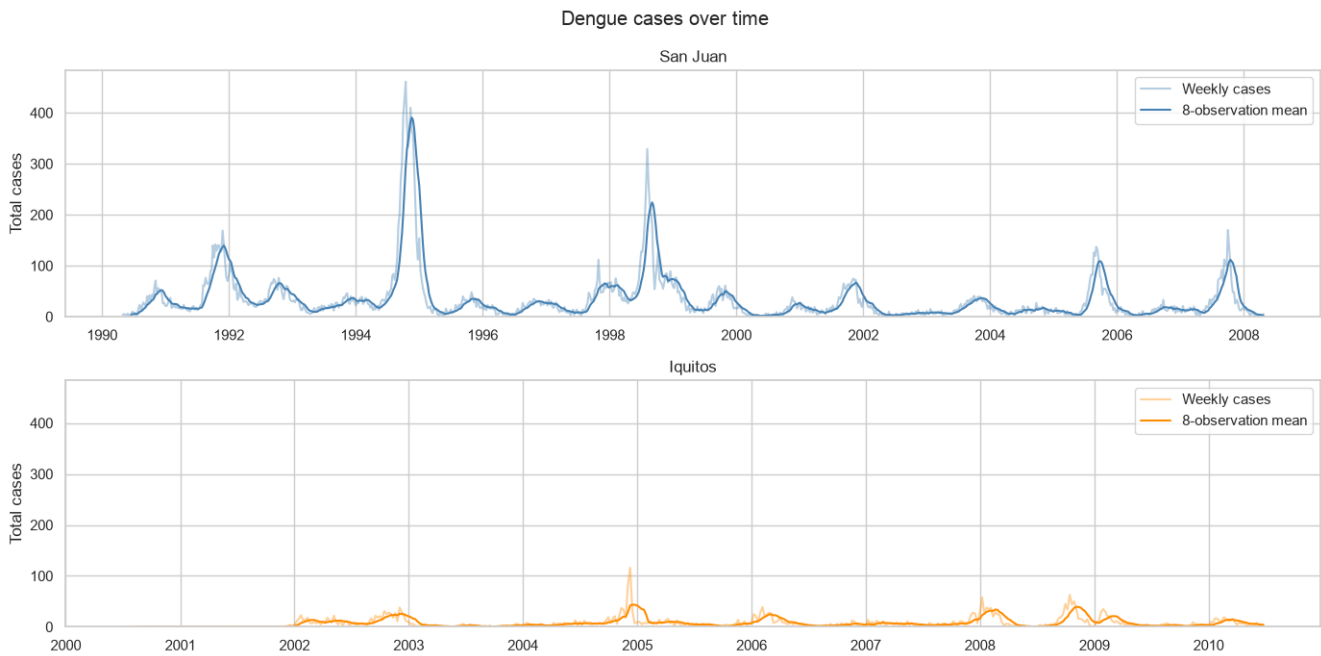

Figure 1: Weekly dengue cases over time, by city

Seasonality

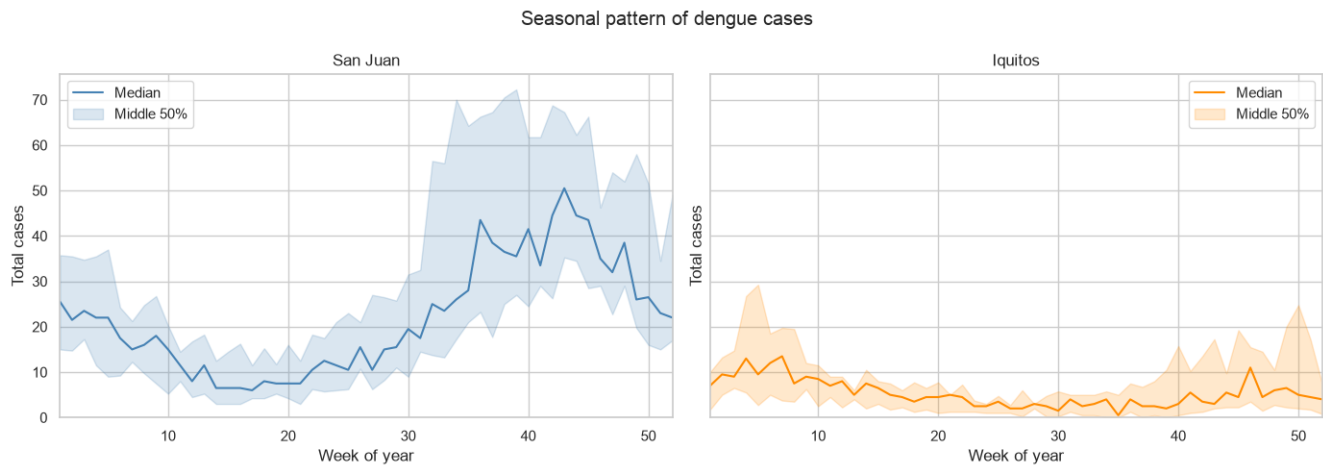

Figure 2: Seasonal profile: median cases by week of year

San Juan tends to have higher counts later in the year, while Iquitos has higher medians near the beginning. This supports exploring seasonal features separately for the cities.

Weather and cases

Missing values

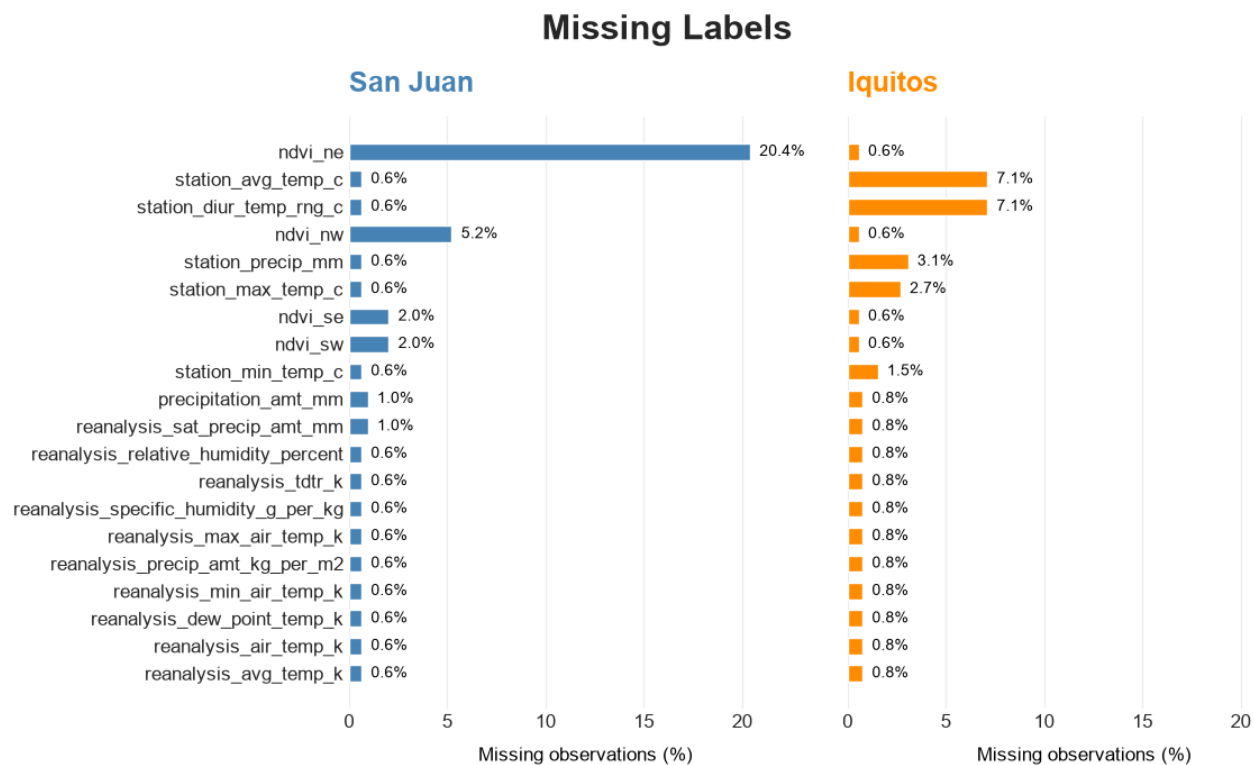

Figure 4: Missing values by column and city

Weather lags

Compare earlier weather and vegetation with current cases using Spearman correlation. A lag of 4 means four rows earlier, approximately four weeks.

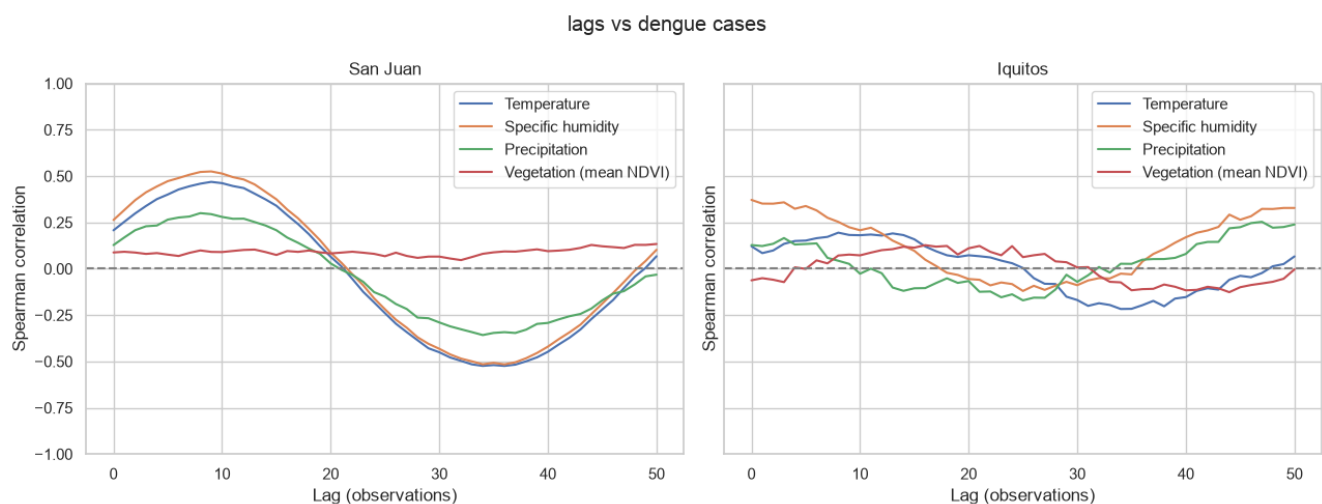

Figure 5: Spearman correlation of lagged weather with current cases
